EASY TO USE, USER FRIENDLY

With two practical hose connections and automatic valves, the user can set the water circulation direction. Let the process water temperature be adjusted automatically as you start right away with the fastest reaction even at low temperatures. Find blocked areas with the pressure gauge, adjust the amount of water with the electronic spirit level, and easily detect the passage of the blockage. Thanks to the homogeneous mixture of the chemical, you can achieve the perfect result with only 0.5 liters of chemicals and automatically follow your programmed work. Increase the number of happy customers while saving time.

TECHNICAL SPECIFICATIONS

- 4x20 Backlit LCD Warning Display
- 35 lt/min. Cycle Water Pump
- 12 lt 316L Inox Tank
- 2500W Fast Heater
- 0-5 bar Precision Pressure Gauge
- 55 Kg Weight
- 74cmx51cmx90cm Dimensions

ERGONOMICS Easy maneuvering in the working environment thanks to its 4 wheels that can rotate in all directions and the push-pull bar.

FLUSH CLEAN RADIATOR CLEANING FLUID

Thanks to the protective inhibitors in its formula, it can be used safely in all heating systems without adversely affecting metal and plastic materials on the system. While cleaning the lime, rust, dirt, and residue formations in the system, it delays their regeneration after use and prevents the formation of corrosion, damage, and cracks.

Note: Flush Clean; It is a specially developed formula for use with RTC-2.
